

Acetamide, 99%

Description

Categories	Cell biology, Bioactive small molecules
Assay	99%
Appearance (Form)	Powder or crystals
Appearance (Colour)	White
Melting point	78-80 °C

Acetamide is an organic compound with the formula CH_3CONH_2 . It is the simplest amide derived from acetic acid. It is used as a plasticizer and as an industrial solvent.

APPLICATION

Acetamide, for synthesis 99% is used as a precursor to thioacetamide. A 1235 (OTTO) Acetamide, for synthesis 99% is used as a precursor to thioacetamide. It finds application in lacquers and soldering flux. It is a precursor to thioacetamide.
