

Glutathione Oxidized (GSSG) Assay Kit

Description

Applications

notes

Product name Micro Glutathione Oxidized (GSSG) Assay Kit

Reduced glutathione can react with DTNB and generate 2-nitro-5-mercaptobenzoic acid, which has the maximum light absorption at 412 nm wavelength. The original reduced glutathione in the sample is inhibited by 2-vinylpyridine, and then GSSG is

reduced to GSH by Glutathione Reductase to determine the content of GSSG.

Product Properties

• Extraction Buffer

• Inhibitor

• Assay Buffer

Kit components • GR

• GR Cofactor • Chromogen • Standard

• Determination of the content of GSSG in serum, plasma, plant tissues,cell lysates

Features & and other biological fluids.

Benefits • A broad range linearity: 1-20 µM.

• The minimum detection concentration is less than 1 µM.

• If the experiment is not carried out immediately, the sample can be kept at -80°C

for 10 days.

Usage notes a €¢ All samples should make a 1:10 dilution with deionized water, and the result was

multiplied by a factor of 10.

• Always prepare fresh standards per use.

• Diluted standard solution is unstable and must be used within 4 hours.

Storage Storage at -20°C and Keep from light immediately upon receipt. Kit has a storage

time of 12 months from receipt. Refer to list of materials supplied for storage

instructions instructions

conditions of individual components.

Shipping Gel pack with blue ice.

The product listed herein is for research use only and is not intended for use in human

or clinical diagnosis. Suggested applications of our products are not recommendations

Precautions to use our products in violation of any patent or as a license. We cannot be

responsible for patent infringements or other violations that may occur with the use of

this product.

Additional Information

Glutathione comes in two forms: reduced (GSH) and oxidized (GSSG). Glutathioneoxidized is the oxidized form of Glutathione, also known as Dithioglutathione, which isformed by the oxidation of two reduced glutathione molecules. GSSG is reduced to GSHby Glutathione Reductase. Reduced glutathione exists in a large number of organisms and plays a major role. Measurement of GSH and GSSG content and GSH / GSSG ratiocan reflect cells redox state, and it is also one main indicator of glutathione redox cycle.
